

MerchantView

Continuous visibility into merchant risk across the full lifecycle

The Problem

Merchant risk cannot be fully understood at onboarding alone.

Hidden connections and changing merchant behavior introduce exposure over time, making it difficult to maintain consistent controls and expand safely.

The Solution – MerchantView

MerchantView is an ongoing monitoring solution that evaluates risk across the full merchant lifecycle.

It combines proprietary data, AI-driven insights, and network intelligence to assess merchants and **maintain visibility as merchant behavior and risk evolve over time.**

Why MerchantView

Because merchant risk is driven by evolving behavior and connected activity, not point-in-time signals.

Key Outcomes

- ✔ Maintain continuous visibility into evolving merchant risk
- ✔ Identify hidden connections and emerging risk as behavior changes
- ✔ Support safe expansion into new regions and verticals
- ✔ Reduce reactive enforcement by surfacing risk earlier

**AI-driven merchant
risk intelligence,
delivered in minutes**
